Summary

Full stack engineer building production AI products end to end: Claude-powered agents, RAG, and LLM features, plus the TypeScript, React, and PostgreSQL systems behind them. Ships fast with AI coding agents, backed by real-database tests and gated deploys.

Experience

Blurbs · New York, NY

October 2025 – Present

Full Stack Engineer

- Built core product for an AI-powered B2B vendor-discovery platform (Next.js, React, TypeScript, PostgreSQL) as one of two engineers, shipping steady production releases with parallel Claude Code agents.
- Designed and built the conversational AI workspace where buyers scope a purchase with a Claude-powered RAG agent: streaming chat, guided questions, and a live plan that outlines solutions and fills in matching vendors.
- Architected a self-running meetings engine: admin-designed step programs (drag-and-drop flow designer), automated scheduling, and in-browser Agora video calls with live captions, recording, and Claude-written summaries and reports.
- Shipped LLM features on the Anthropic API, including AI-drafted social posts and meeting reports, plus a prompt playground that runs the exact production prompt against test data.
- Built the email platform on Amazon SES with React Email templates, a preference center and unsubscribe flow, a send log, per-feature kill switches, and a template test suite that caught live bugs before release.
- Built the internal admin console, where one shared filter model drives every table, CSV export, and trend chart, with server-enforced edit locks.
- Owned the shared design system (Tailwind, Storybook), a site-wide mobile pass, and SEO: generated Open Graph images, sitemap, and programmatic landing pages.
- Designed PostgreSQL schemas (Kysely) and real-database Vitest suites, deployed via GitHub Actions to AWS ECS.

Infinity Lumber · Brooklyn, NY

June 2022 – October 2025

Web Developer

- Built and launched the company website in React, TypeScript, and CSS with an accessible, responsive design.
- Deployed Google Cloud Platform infrastructure supporting remote inventory management and secure user authentication.
- Built a responsive internal dashboard that streamlined invoice processing and automated inventory tracking.

Education

Designing and Building AI Products and Services

MIT xPro

Scoping business problems for AI, and designing, evaluating, and deploying machine-learning and LLM products.

B.S. Computer Programming and Information Systems

Farmingdale State College, NY

Concentration in Web Development; minor in Sociology.

Skills

AI Engineering: Claude API, LLM agents and tool use, RAG, embeddings (pgvector), streaming, structured outputs, prompt engineering

AI Tools: Claude Code, Codex, ChatGPT, multi-agent workflows in parallel git worktrees

Languages: TypeScript, JavaScript, Python, SQL, HTML, CSS, C#, Java

Frontend: React, Next.js (App Router, Server Components), Tailwind CSS, Redux, Storybook, React Email

Backend & Data: Node.js, Express.js, REST APIs, PostgreSQL, Kysely, Redis, NextAuth, Firebase

Cloud & DevOps: AWS (ECS, S3, SES), Google Cloud Platform, Microsoft Azure, Docker, GitHub Actions, Vitest, Playwright

Tools: Git/GitHub, VS Code, Vim, Linux, Postman, Agora RTC, Adobe Photoshop
